DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 3/11/2005 has been entered.

Response to Remarks

The amendments to the specification have been entered and considered. No new subject matter has been found with regard to the amended portions of the specification. Furthermore, no double-patenting issues exist between the application and the patents whose teachings are incorporated in the specification by reference.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: none of the prior art teaches of processing a grid layout wherein a fiducial graph for a grid in a given dimension is generated, traversing the fiducial graph and combining the size preferences of the constraints into a size preference for the grid; then, assigning positions to the grid fiducials by allocating sizes within the assigned grid size to the grid constraints in the given dimension, and assigning positions to the grid fiducials by traversing the fiducial graph, allocating sizes within the grid size to the grid constraints

in the given dimension. The cited prior art of Morgan, Akiyama et al., Iizawa et al., and Kellerman et al. teach of arranging graphical elements within a window according to the size and orientation of the elements with respect to each other. The cited prior art of Hargrove, Mariani, Cohn, Ellison-Taylor, and Porter et al. all teach of arranging windows on a display device based on their size and position. The cited reference of Her teaches of determining electrical routing paths on a grid of cells by a computer prior to fabrication. The routing paths take into consideration the size of the cells, positioning constraints, and the cost factors associated with each routing consideration. All the cited art determines the layout of either cell or window elements based upon their sizes, relative positions with respect to one another, and their location. However, none of the prior art cited teaches of the size preferences comprising an elastic property. Additionally, none of the references teach of generating the fiducial graph of the applicant's invention for a grid with which to assign positions and allocate sizes to the grid constraints.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Blake E. Betz whose telephone number is (571) 272-7655. The examiner can normally be reached on 7:30 - 4:00 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Razavi can be reached on (571) 272-7664. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
